MEMORANDUM

TO: City and County Superintendents

FROM: Thomas R. Bice
State Superintendent of Education

SUBJECT: 2015 Pupil Transportation Route Report Information

October 2, 2015

This memorandum provides information about your annual Local Education Agency Transportation Route Report due to the Alabama State Department of Education (ALSDE) on October 16, 2015. Since this report affects your school system's transportation funding, it is extremely important that this information be shared with your transportation supervisor, as well as the staff member who compiles this report for your school system.

For 2015, the route report will be completed via the Transportation Bus Route application. To access the application, school systems should go to https://aim.alsde.edu and log-in using AIM log-in credentials. If the supervisor or superintendent is new to AIM, a new account must be created. Once logged into AIM, an application inventory screen will appear with a tile for each application for which a user is granted access. If you do not see a Transportation Bus Route tile, then verify that all personnel needing access to the report are correctly shown by position within the Education Directory. The positions that have access to the new bus route application are the superintendent, assistant superintendent, secretary to the superintendent, and transportation supervisor. More than one employee may need to be added to the transportation positions within the Education Directory to ensure access to all employees who need information from the route report application.

An electronic sign-off in the Web application is needed from the superintendent when the report is ready for submission. Sign-offs are also needed any time changes are made after the original data submission. No changes can be made from October 17 through November 2, 2015. This “lock out” time block is necessary to enable the ALSDE to compile the needed school system and statewide data.

As with the 2014 report, the Second Month Route Report, found in the School Bus Driver Record and Report Book, should be utilized to determine the data for each route. For the report, school systems should choose the highest count (morning or afternoon) for each day beginning with the first day after Labor Day through the end of September to arrive at student counts for each route. All of the counts chosen should be averaged to determine the reported student data.

Loaded miles, unloaded miles, and “time on bus” should be calculated for each route by the transportation supervisor. A new item on the Route Report will allow the reporting of miles per gallon (mpg). Be sure that this data has been included for every bus before submitting the report. Failure to do so could affect your Transportation Operations Allocation. Directions for data entry can be found by clicking on the help button.

It is important that these reports be submitted by the due date in order to allow sufficient time for ALSDE staff to review the data for accuracy. Inaccurate data can result in a loss of transportation funding for your school system. Report data should also be compared to the LEAPS report to ensure proper funding of bus driver personnel.

If you have questions about this information or your route report data, please contact Jerry Lassiter or Kevin Snowden at (334) 242-9730. If you have questions about accessing the Web application, e-mail the helpdesk@alsde.edu or call (334) 353-1250.
