I. Background

This emergency preparedness planning document addresses how the State of Alabama Department of Education (ALSDE) and Local Education Agency (LEA) respond to pandemic influenza through its School System and Individual School Safety Plan. This document will be periodically reviewed and updated by the ALSDE Pandemic Preparedness Executive Planning Committee to ensure that information contained within the document is consistent with current knowledge and changing infrastructure. The Executive Planning Committee will consist of, but not limited to, the ALSDE Incident Command System (ICS) designated officers and chiefs.

Before, during, and after a pandemic influenza outbreak, ALSDE and the LEA systems have a responsibility to ensure the continuation and delivery of essential education services. The appendices of this document contain specific guidance and handouts for pandemic preparedness.

II. Purpose

The ALSDE has drafted this Pandemic Preparedness Plan (PPP) to assist the LEAs in preparing and responding to a pandemic outbreak.

III. Assumptions

Pandemic preparedness planning is based on the following general assumptions:

- Susceptibility to the pandemic influenza subtype will be universal.
- The clinical disease attack rate will be 30% in the overall population. Illness rates will be highest among school-aged children (about 40%) and decline with age. Among working adults, an average of 20% will become ill during a community outbreak.
- Of those who become ill with influenza, 50% will seek outpatient medical care.
- The number of hospitalizations and deaths will depend on the virulence of the pandemic virus. Estimates differ about 10-fold between more and less severe scenarios. Because the virulence of the influenza virus that causes the next pandemic cannot be predicted, two scenarios are presented based on extrapolation of past pandemic experience.
- Risk groups for severe and fatal infections cannot be predicted with certainty.

- Risk groups for severe and fatal infections cannot be predicted with certainty. During annual fall and winter influenza season, infants and the elderly, persons with chronic illnesses, and pregnant women are usually at higher risk of complications from influenza infections. In contrast, in the 1918 pandemic, most deaths occurred among young, previously healthy adults.
- The typical incubation period (the time between acquiring the infection until becoming ill), for influenza averages 2 days. We assume this would be the same for a novel strain that is transmitted between people by respiratory secretions.
- Persons who become ill may shed virus and can transmit infection for one-half to one day before the onset of illness. Viral shedding and the risk for transmission will be greatest
during the first 2 days of illness. Children will shed the greatest amount of virus and, therefore are likely to pose the greatest risk for transmission.

- On average about 2 secondary infections will occur as a result of transmission from someone who is ill. Some estimates from past pandemics have been higher, with up to about 3 secondary infections per primary case.
- In an affected community, a pandemic outbreak will last about 6 to 8 weeks. At least two pandemic disease waves are likely. Following the pandemic, the new viral subtype is likely to continue circulating and to contribute to seasonal influenza.
- The seasonality of a pandemic cannot be predicted with certainty. The largest waves in the U.S. during 20th century pandemics occurred in the fall and winter. Experience from the 1957 pandemic may be instructive in that the first U.S. cases occurred in June but no community outbreaks occurred until August and the first wave of illness peaked in October.

Pandemic preparedness planning is based on the following ALSDE assumptions:

- In the event of a pandemic the ALSDE will have minimal resources available for LEA assistance, therefore, LEAs will be responsible for school specific pandemic preparedness and response plans, including the modification of this document to be LEA specific.
- Local communities may have emergency preparedness plans and/or pandemic preparedness plans in place. The local community leaders and LEAs will communicate existing plans for effective implementation to minimize the pandemic effect.
- An effective response to pandemic influenza will require coordinated efforts of a wide variety of organizations, including public, private, health, and non-health related.
- The federal government has limited resources allocated for State and local plan implementation, therefore the ALSDE will provide supplementary resources in the event of a pandemic, which may include the redirection of personnel and monetary resources from other programs.
- The federal government has assumed the responsibility for developing materials and guidelines, to include basic communication materials for the general public on influenza, influenza vaccine, antiviral agents, and other relevant topics; information and guidelines for health care providers; and training modules. Until these materials are developed, the ALSDE in conjunction with the Alabama Department of Public Health provide such materials for the LEAs.
- A novel influenza virus strain will likely emerge in a country other than the United States, but could emerge in the United States and possibly Alabama.
- According to the federal government it is highly likely that a moderate to severe shortage and possibly no vaccine will exist early in the course of the pandemic.
- The supply of antiviral medications for prevention and treatment of influenza will be limited.
- Infection control measures, such as, isolating the sick, screening travelers, and reducing the number of public gatherings, may help to slow the spread of influenza early in the pandemic period.
- Federal and State declarations of emergency will change legal and regulatory aspects of providing educational services during a pandemic.
- A pandemic will pose significant threats to the educational process due to wide spread absenteeism.
IV. Pandemic Influenza Phases

The World Health Organization (WHO) and the CDC have defined phases of pandemic influenza in order to assist with planning and response activities in states. Identification and declaration of the stages outlined in Table 1 will be done at the national level.

Table 1. WHO Pandemic Phases

<table>
<thead>
<tr>
<th>WHO PANDEMIC PHASES</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Interpandemic period</strong></td>
</tr>
<tr>
<td>Phase 1. No new influenza virus subtypes have been detected in humans. An influenza virus subtype that has caused human infection may be present in animals. If present in animals, the risk(^a) of human infection or disease is considered to be low.</td>
</tr>
<tr>
<td>Phase 2. No new influenza virus subtypes have been detected in humans. However, a circulating animal influenza virus subtype poses a substantial risk(^a) of human disease.</td>
</tr>
<tr>
<td><strong>Pandemic alert period</strong></td>
</tr>
<tr>
<td>Phase 3. Human infection(s) with a new subtype, but no human-to-human spread, or at most rare instances of spread to a close contact.</td>
</tr>
<tr>
<td>Phase 4. Small cluster(s) with limited human- to-human transmission but spread is highly localized, suggesting that the virus is not well adapted to humans.(^b)</td>
</tr>
<tr>
<td>Phase 5. Larger cluster(s) but human-to- human spread still localized, suggesting the virus is becoming increasingly better adapted to humans, but may not yet be fully transmissible (substantial pandemic risk).(^b)</td>
</tr>
<tr>
<td><strong>Pandemic period</strong></td>
</tr>
<tr>
<td>Phase 6. Pandemic phase: increased and sustained transmission in general population.(^b)</td>
</tr>
<tr>
<td><strong>Postpandemic period</strong></td>
</tr>
<tr>
<td>Return to phase interpandemic period.</td>
</tr>
</tbody>
</table>

\(^a\) The distinction between phase 1 and phase 2 is based on the risk of human infection or disease resulting from circulating strains in animals. The distinction would be based on various factors and their relative importance according to current scientific knowledge. Factors may include: pathogenicity in animals and humans; occurrence in domesticated animals and livestock or only in wildlife; whether the virus is enzootic or epizootic, geographically localized or widespread; other information from the viral genome; and/or other scientific information.

\(^b\) The distinction between phase 3, phase 4 and phase 5 is based on an assessment of the risk of a pandemic. Various factors and their relative importance according to current scientific knowledge may be considered. Factors may include: rate of transmission; geographical location and spread; severity of illness; presence of genes from human strains (if derived from an animal strain); other information from the viral genome; and/or other scientific information.

Table 2. LEA Pandemic Influenza Alert Matrix (Epidemic Respiratory Infection)

<td>Level III-Orange (Pandemic)</td>
</tr>
<tr>
<td>Person-to-person transmission</td>
<td>In Alabama/at LEA</td>
<td>YES</td>
<td>Level IV-Red (Pandemic)</td>
</tr>
</tbody>
</table>

V. Authority/Legal Preparedness

The ALSDE has designated the U.S. Department of Health & Human Services (HHS) to oversee the influenza pandemic planning process in cooperation with local health agencies and partners. During a pandemic, HHS will have primary responsibility for:

- Making recommendations to local health departments, health care providers and facilities, and the general public to aid in minimizing the spread of influenza,
- Maintaining surveillance systems to monitor the spread of disease,
- Keeping the public informed.

While no provision of law addresses pandemic influenza specifically, some statutory provisions authorize relevant actions. The ALSDE and LEAs should be knowledgeable of the following legal issues to effectively plan and respond to influenza pandemic:

- Alabama laws and procedures on quarantine, isolation, closing premises, and suspending public meetings to minimize the spread of the virus.
- Statutes for mandatory vaccination during an infectious disease emergency.
- Medical volunteer licensure, liability, and compensation for ALSDE and LEA health care providers.
- Workers’ compensation laws as they apply to health care providers and other essential personnel who have taken antivirals for prophylaxis.
VI. Response Activities by Level of Alertness

A. Level Ready & Green (LEA alert matrix)/Interpandemic period (WHO)
   1. Access Control
   2. Surveillance, Screening and Triage
   3. Infection Control/Precautions
   4. Communication/Education
   5. Additional Preparedness Activities

B. Level Yellow & Orange (LEA alert matrix)/Pandemic Alert Period (WHO)
   1. Access Control
   2. Surveillance, Screening and Triage
   3. Infection Control/Precautions
   4. Communication/Education
   5. Additional Preparedness Activities

C. Level Red (LEA alert matrix)/Pandemic Period (WHO)
   1. Access Control
   2. Surveillance, Screening and Triage
   3. Infection Control/Precautions
   4. Communication/Education
   5. Additional Preparedness Activities

OPTIONAL PAGE FOR GUIDANCE IN PREPARATION OF PANDEMIC PREPAREDNESS PLANS.
**LEA PANDEMIC PREPAREDNESS MATRIX (SUGGESTED)**

- Notify LEA Superintendent, County Health Department, and appropriate medical personnel of detected cases of the pandemic. | Communications:  
- Maintain daily or more frequent contact, via web, dedicated phone line, and/or email, with the LEA Nurse/Health Officer for updates on the pandemic.  
- The LEA, with guidance from the County Health Department, will identify close contacts in the department to a suspect or confirmed case of the pandemic. Contacts are defined as those who spent >15 minutes within 3 feet of the case during his/her infectious period (2 days before illness onset to five days after illness onset).  
- When directed by the LEA Superintendent, suspend all work from work areas (Central Office, etc.). |
## LEA PANDEMIC PREPAREDNESS MATRIX (SUGGESTED FORMAT)

<table>
<thead>
<tr>
<th>PANDEMIC PHASE</th>
<th>Preparedness/Readiness (Novel Virus Alert)</th>
<th>Level I-Green (Pandemic Alert) (In addition to Preparedness/Readiness)</th>
<th>Level II-Yellow (Pandemic Imminent) (In addition to Level I)</th>
<th>Level III-Orange (Pandemic) (In addition to Level II)</th>
<th>Level IV-Red (Pandemic) (In addition to Level III)</th>
</tr>
</thead>
</table>
| LEA TRANSPORTATION DIRECTOR | Student Transportation:  
- Maintain quarterly contact with the LEA Nurse/Health Officer for updates on the pandemic.  
- Develop a plan to distribute personal protective equipment (PPE).  
- Develop a plan to monitor periodic cleaning of work areas (buses and bus shop).  
- Develop a plan to report suspected and confirmed cases of the pandemic to the LEA Superintendent, County Health Department, and appropriate medical personnel.  
- Identify essential staff and develop contingency plans for operations under prolonged staff shortages or shortages of other resources. | Student Transportation:  
- Maintain monthly contact with the LEA Nurse/Health Officer for updates on the pandemic.  
- Post informational posters that promote respiratory hygiene cough/sneeze etiquette within work area.  
- Offer and encourage staff to receive annual on-site influenza vaccine.  
- Staff training pandemic awareness.  
- Staff training on proper hand hygiene and cough/sneeze etiquette and use of PPE. | Student Transportation:  
- Maintain weekly contact with the LEA Nurse/Health Officer for updates on the pandemic.  
- Distribute PPE to personnel.  
- Implement work area periodic cleaning plan.  
- Implement the plan for suspected and confirmed cases of pandemic infections.  
- When directed by the LEA Superintendent, limit or discontinue travel outside of the school district. | Student Transportation:  
- Maintain daily contact with the LEA Nurse/Health Officer for updates on the pandemic.  
- When directed by the LEA Superintendent, inform personnel experiencing signs and symptoms of the pandemic to remain at home for 24 hours and/or until released by a physician.  
- When directed by the LEA Superintendent, limit or discontinue travel within the school district.  
- Distribute surgical masks to personnel.  
- Notify LEA Superintendent, County Health Department, and appropriate medical personnel of detected cases of the pandemic. | Student Transportation:  
- Maintain daily or more frequent contact, via web, dedicated phone line, and/or email, with the LEA Nurse/Health Officer for updates on the pandemic.
